SUMMARY

Computer Science (Cybersecurity) student at Arizona State University with experience building a Wazuh SIEM home lab and ThreatLens V2, a Python platform for behavioral detection and incident correlation. Seeking a SOC analyst role focused on security monitoring and investigation.

EDUCATION

Arizona State University Aug 2023–Dec 2027 (expected)
B.S., Computer Science (Cybersecurity) *Tempe, Arizona*

- GPA: 3.48 | Dean's List, New American University Scholar
- Coursework: Information Assurance, Computer Network Security, Computer and Network Forensics, Data Structures & Algorithms

WORK EXPERIENCE

Arizona State University Mar 2025–Present
Technology Consultant *Phoenix, AZ*

- Scripted classroom workflows in Python, reducing manual work by over 20%.
- Resolved Windows and macOS technical issues for 100+ users weekly and improved troubleshooting documentation.
- Deployed and managed AWS EC2 instances, improving system efficiency by 25%.

Orion Tech May 2024–Jul 2024
Application Security Developer Intern *Remote*

- Protected backend APIs with OAuth 2.0 and JWT authentication and role-based controls for restricted actions.
- Hardened input handling against SQL injection and XSS, then validated web flows with Burp Suite.
- Scripted audit logging and monitoring workflows so security events could be traced during investigation.

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, C/C++, SQL, Swift
- Frameworks & Tools: Flask, Git, React, Next.js, TailwindCSS, Supabase
- Cloud & Systems: AWS EC2, Windows, Linux/WSL2, networking
- Security Tools: Wazuh SIEM, Wireshark, Nmap, Burp Suite, AbuseIPDB; Windows event logs
- Concepts: Alert triage, IOC investigation, log analysis, MITRE ATT&CK, OWASP Top 10, access control

PROJECTS

OpenSOC Lab – Wazuh SIEM Home Lab 2026

- Deployed Wazuh manager, indexer, Filebeat, and dashboard on Ubuntu WSL2 to centralize endpoint events.
- Connected 1 Windows 11 agent and verified that baseline security telemetry reached the dashboard.
- Reviewed collected host events in the SIEM to practice endpoint activity analysis and investigation.

ThreatLens V2 – SOC Log Analysis Platform May 2026–Present

- Developed a Flask analysis pipeline that normalizes SSH, web, and Windows process/Sysmon events for modular behavioral rules.
- Correlated multi-stage account compromise, suspicious execution, and ransomware-like activity; one 22-event case yielded 3 findings and 1 critical incident.
- Enriched findings with MITRE ATT&CK and AbuseIPDB context; produced PDF/CSV reports and passed 30 automated tests.

Web Application Security Scanner 2026

- Developed a Python scanner with requests and BeautifulSoup to test web inputs for SQL injection and XSS risks.
- Analyzed HTTP requests across 50+ extracted input fields, reducing manual testing effort by approximately 40%.
- Produced severity-ranked reports so identified vulnerabilities could be prioritized for remediation.

CERTIFICATIONS & HANDS-ON TRAINING

- **CompTIA Security+** – In Progress | Studying core domains: network security, threats & vulnerabilities, identity management, cryptography, and risk management
- **pwn.college – Orange Belt Holder** | Hands-on training in Fundamentals and Introduction to Cybersecurity
- **Google Foundations of Cybersecurity** – Coursera | Completed foundational training in security frameworks, threat identification, and security operations concepts
- **TryHackMe** – Cybersecurity Learning Paths | Actively completing guided labs in networking fundamentals, SOC operations, and web application security
- **Hack The Box, Let's Defend & CyberDefenders** – Active Hands-On Training | Practicing SOC analyst workflows through labs focused on threat detection, security log analysis, IOC investigation, and incident response scenarios
