SUMMARY

Cybersecurity-focused Computer Science student at Arizona State University (GPA 3.9) with a strong passion for SOC operations, threat detection, and incident analysis. Actively building hands-on skills through real-world projects like ThreatLens — a Flask-based SOC log analysis platform — and continuous practice on Hack The Box, Let's Defend, and CyberDefenders. Experienced applying security tools including Wireshark, Nmap, and Burp Suite in both academic and professional settings, with a solid CS foundation in Python, secure coding, and cloud infrastructure (AWS). Eager to contribute as a SOC Analyst intern and grow within a security operations environment.

EDUCATION

Arizona State University Aug 2023 - May 2027
B.S., Computer Science (Cybersecurity) *Tempe, Arizona*

- GPA: 3.9
- Achievements: Dean's List, New American University Scholar
- Coursework: Data Structures & Algorithms, Computer Organization, Programming Languages, Digital Design, Probability & Statistics

WORK EXPERIENCE

Arizona State University Mar 2025 - Present
Technology Consultant *Phoenix, AZ*

- Automated classroom workflows using Python (OOP) and scripted data transformations, reducing manual workload by over 20%
- Diagnosed and resolved technical issues across Windows and macOS systems for 100+ users weekly, streamlined troubleshooting documentation
- Deployed and managed AWS EC2 instances, improving system efficiency by 25%
- Ensured secure configurations and network reliability across campus systems by applying hardening guidelines, conducting regular audits with Wireshark and Nmap, and monitoring performance, reducing security incidents and downtime

Orion Tech May 2024 - Jul 2024
Application Security Developer Intern *Remote*

- Engineered secure authentication and access control using OAuth 2.0, JWT, and role-based access control, which prevented unauthorized access and improved the app's security
- Built backend APIs with emphasis on secure coding practices, including input sanitization and protection against OWASP Top 10 vulnerabilities
- Leveraged scripting tools to automate audit logging and monitoring workflows, enhancing visibility, incident tracking, and threat detection capabilities
- Conducted security-aware testing and validation using Burp Suite, ensuring robustness against potential exploits and vulnerabilities

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, C/C++, SQL, Swift
- **Frameworks & Tools:** React, Next.js, TailwindCSS, Supabase, Git
- **Cloud & Systems:** AWS (EC2), Linux, Networking Basics
- **Security Tools:** Wireshark, Nmap, Burp Suite
- **Concepts:** Threat Detection, Security Monitoring, Vulnerability Assessment, OWASP Top 10, Log Analysis, Access Control

PROJECTS

ThreatLens – AI-Powered Threat Detection & SOC Analysis Platform May 2026 – Present

- Built a Flask-based SOC log analysis platform that processes uploaded security logs and extracts Indicators of Compromise (IOCs), enabling faster threat investigation workflows
- Automated detection of suspicious IP addresses, SSH brute-force attempts, unauthorized login events, and web scanning behavior by parsing and correlating log data using Python

- Implemented MITRE ATT&CK technique mapping and real-time severity classification to accelerate incident triage and support structured threat analysis
- Integrated AbuseIPDB threat intelligence API for live IP reputation lookups, enriching IOC findings with external threat context
- Generated automated PDF investigation reports and CSV IOC exports; built 4 interactive attack simulation demos replicating real SOC analyst scenarios across 3 supported file formats (LOG, TXT, PDF)

Web Application Security Scanner

- Built a Python-based security scanner to detect OWASP Top 10 vulnerabilities including SQL Injection and XSS, identifying risks early in the development lifecycle
- Automated HTTP request analysis using Python (requests, BeautifulSoup), reducing manual testing effort by ~40% across 50+ extracted input fields
- Generated structured vulnerability reports with severity classifications, improving prioritization and remediation tracking

Clinical Management System

- Contributed to a full-stack web application using Next.js, TailwindCSS, and Supabase for managing patient records and appointments with role-based access control
- Applied secure coding practices including input validation and protection against SQL injection and XSS, reinforcing data privacy across the platform
- Implemented authentication and access control integrated with a PostgreSQL database, ensuring secure and efficient data handling

AI-Powered Mood-Based Location Finder iOS App

- Developed a SwiftUI application using MVVM architecture that recommends locations based on user mood inputs, improving engagement through personalized suggestions
- Implemented dynamic state management and real-time recommendation logic, improving app responsiveness by ~30%
- Designed modular and scalable UI components for maintainability and future feature extensibility

CERTIFICATIONS & HANDS-ON TRAINING

- **CompTIA Security+** – In Progress | Studying core domains: network security, threats & vulnerabilities, identity management, cryptography, and risk management
- **Google Foundations of Cybersecurity** – Coursera | Completed foundational training in security frameworks, threat identification, and security operations concepts
- **TryHackMe – Cybersecurity Learning Paths** | Actively completing guided labs in networking fundamentals, SOC operations, and web application security
- **Hack The Box, Let's Defend & CyberDefenders** – Active Hands-On Training | Practicing SOC analyst workflows through labs focused on threat detection, security log analysis, IOC investigation, and incident response scenarios
